Tamarack™

SyndicationBuilder™

Accelerate

the portfolio syndication process with comprehensive asset pool analysis and design, coupled with automated data tape generation

Higher interest rates and a pullback from equipment finance by banks have increased the need to syndicate pools to fund growth. Tamarack's **Syndication**Builder™ provides your capital market organization with a tool to quickly and precisely build syndication pools. This will allow your capital market team to focus on creating targeted pools addressing your goals, sparing them from laborious and time-consuming tasks.

SyndicationBuilder runs on Tamarack AI's secure SOC2 T2 certified SaaS platform and is available as a feature of **Data**Console™ or as a standalone product. Tamarack performs the execution and build-out at a fixed price, so you are not at risk of cost overruns.

The standalone SyndicationBuilder monthly fee is based on customer size with a breakeven target of as little as 6 months. As always, Tamarack customers own their data and, at the end of the agreement, can choose to have their data deleted or returned.

Reports	Detail
Portfolio Metrics	Portfolio Metrics reporting lets you to examine your existing portfolio in order to define your syndication strategy.
