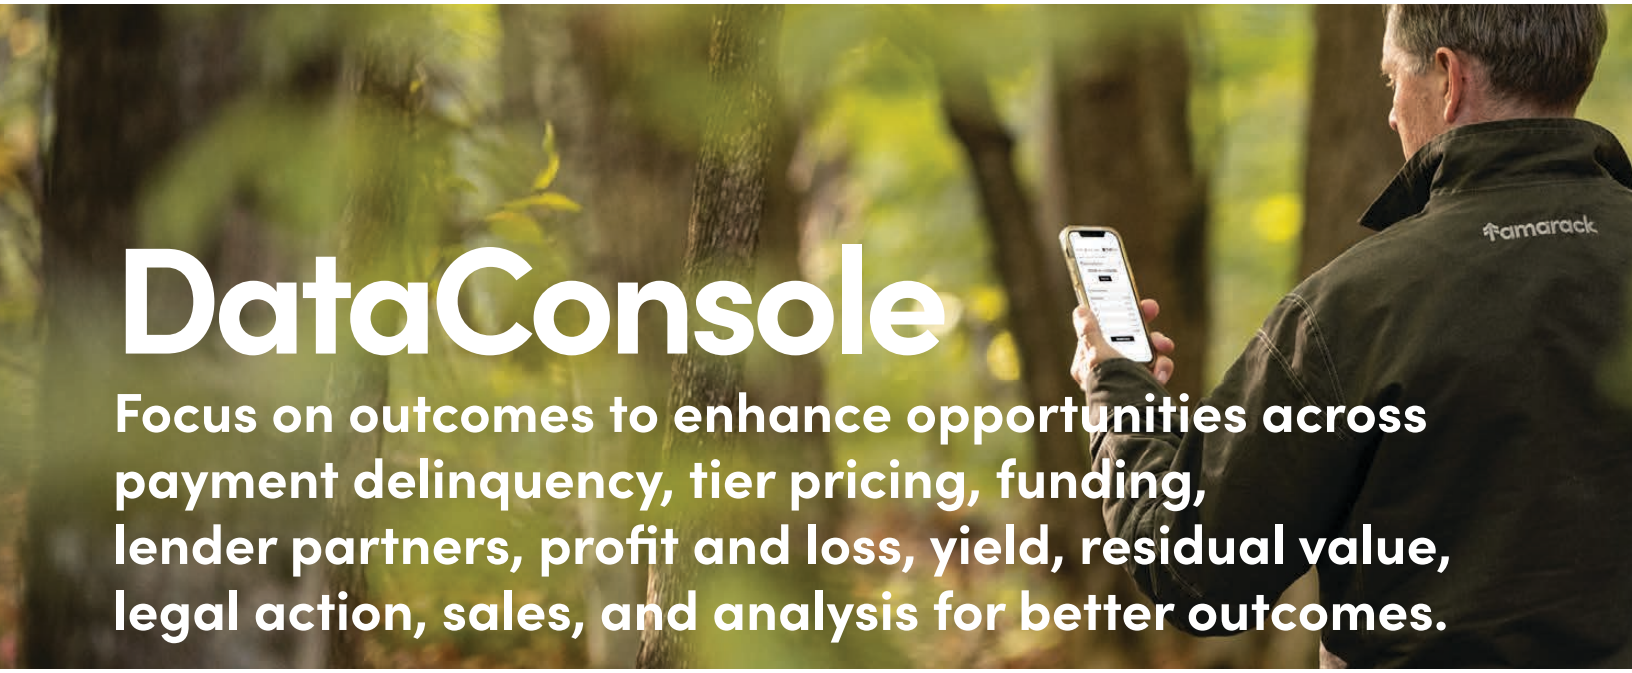
Tamarack™

DataConsole™



DataConsole

Focus on outcomes to enhance opportunities across payment delinquency, tier pricing, funding, lender partners, profit and loss, yield, residual value, legal action, sales, and analysis for better outcomes.

DataConsole™, part of Tamarack AI™ Product Suite, is designed for professionals in the equipment finance industry. This includes Equipment Finance Ops, EF sales teams, and EF partners such as lenders and brokers.

The DataConsole provides a comprehensive analysis and a Business Intelligence (BI) solution for equipment finance professionals. It consolidates data from various sources, allowing users to leverage analytics, intelligence, and reporting to derive actionable insights.

The DataConsole is crucial because it allows equipment finance professionals to gain a holistic view of their data, enabling them to make informed decisions and drive operational improvements. It helps convert data into actionable next steps and provides insights from "dark data" that were previously untapped.

DataConsole	Benefits
Comprehensive analysis	Users can see all their data in a single location, providing a comprehensive view for analysis and decision-making.
Actionable insights	Leveraging analytics and intelligence, professionals can identify trends, opportunities, and areas for improvement within their equipment finance operations.
Operational competitive advantage	By harnessing the power of data and effective partner collaborations, equipment finance professionals can gain a competitive advantage in their operations.
Risk Mitigation	Through data analysis, professionals can understand past contracts, risk distributions, and potential outcomes, allowing them to reduce exposure and make informed decisions.
